Six age 15 outcomes:

- ▶ GPA
- ▶ Material Hardship
- ▶ Grit
- ▶ Evicted
- ▶ Job training
- ▶ Job loss

4,200 families

12,000 features
birth to age 9

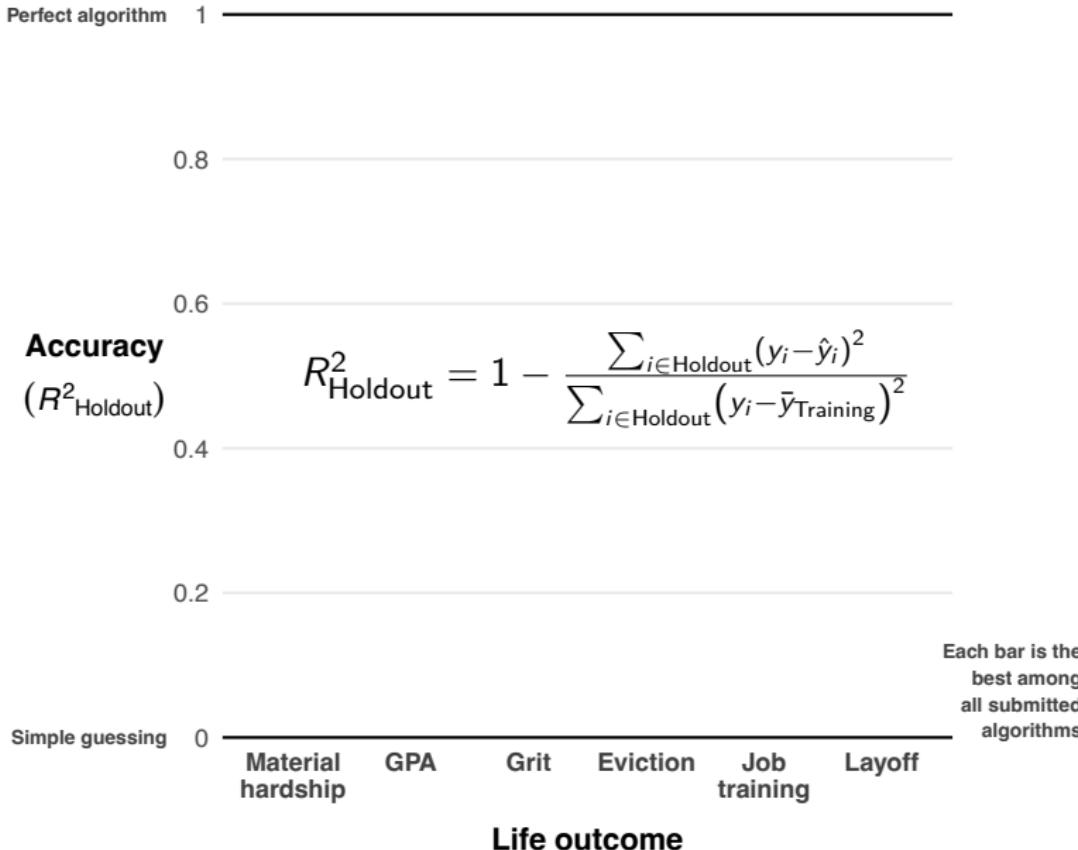

6 outcomes
age 15

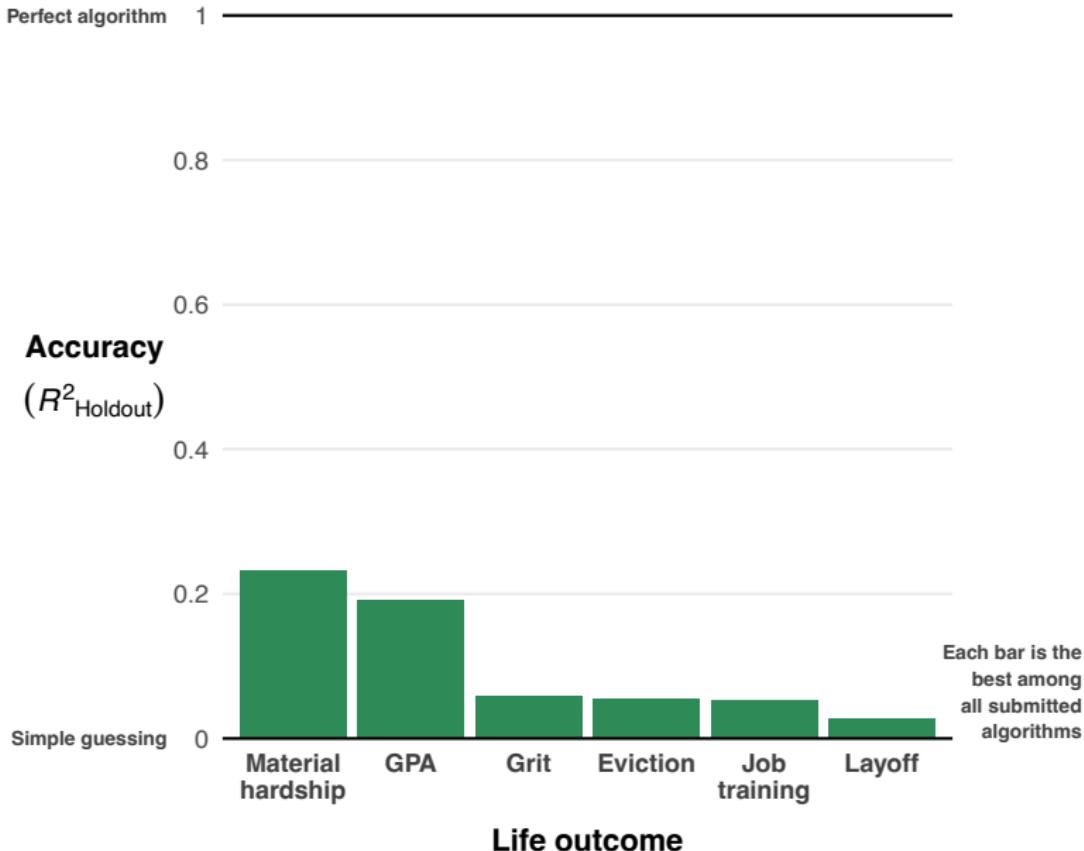

441 registered participants

- ▶ social scientists and data scientists
- ▶ undergraduates, grad students, and professionals
- ▶ many working in teams

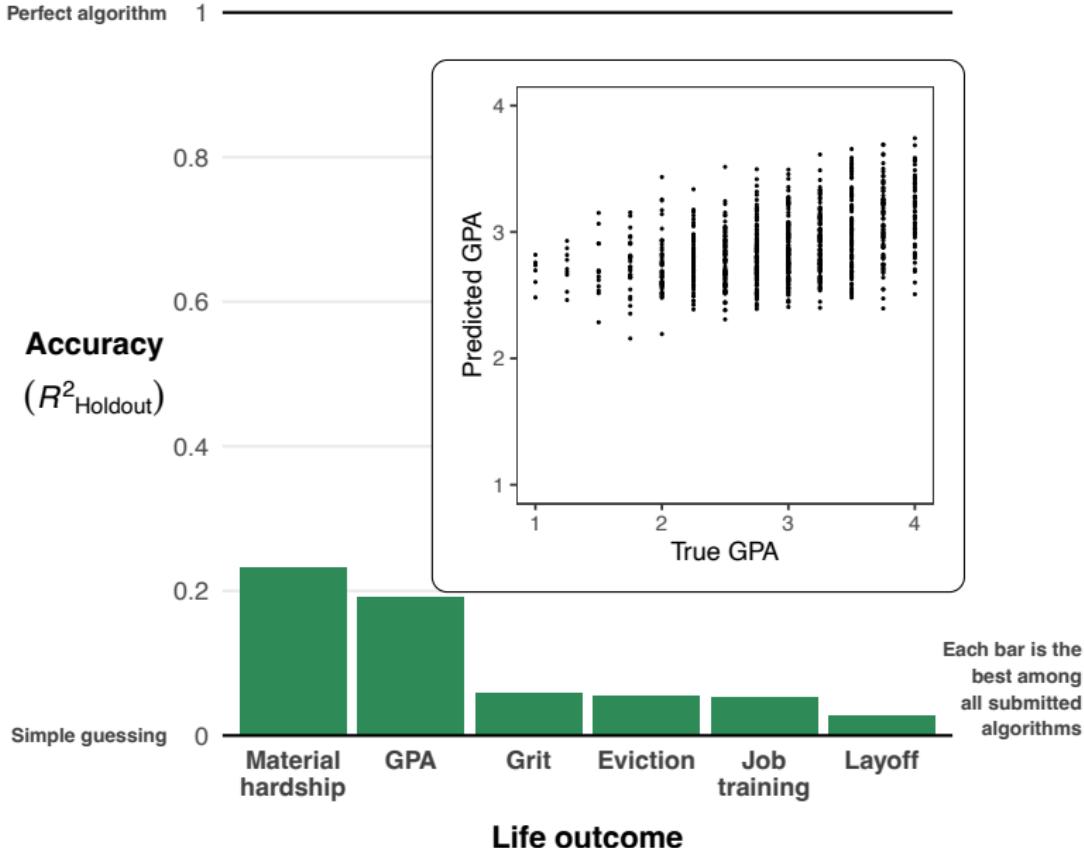

How did they do?

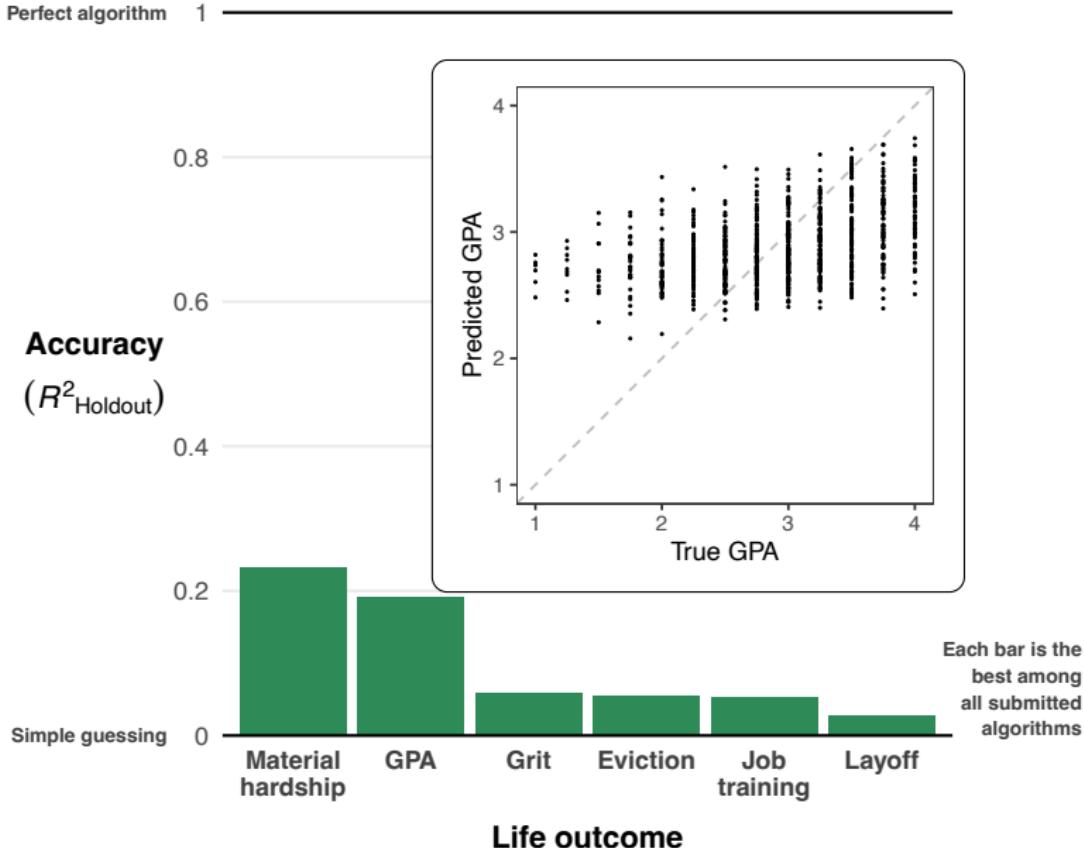

Best algorithms were not very accurate

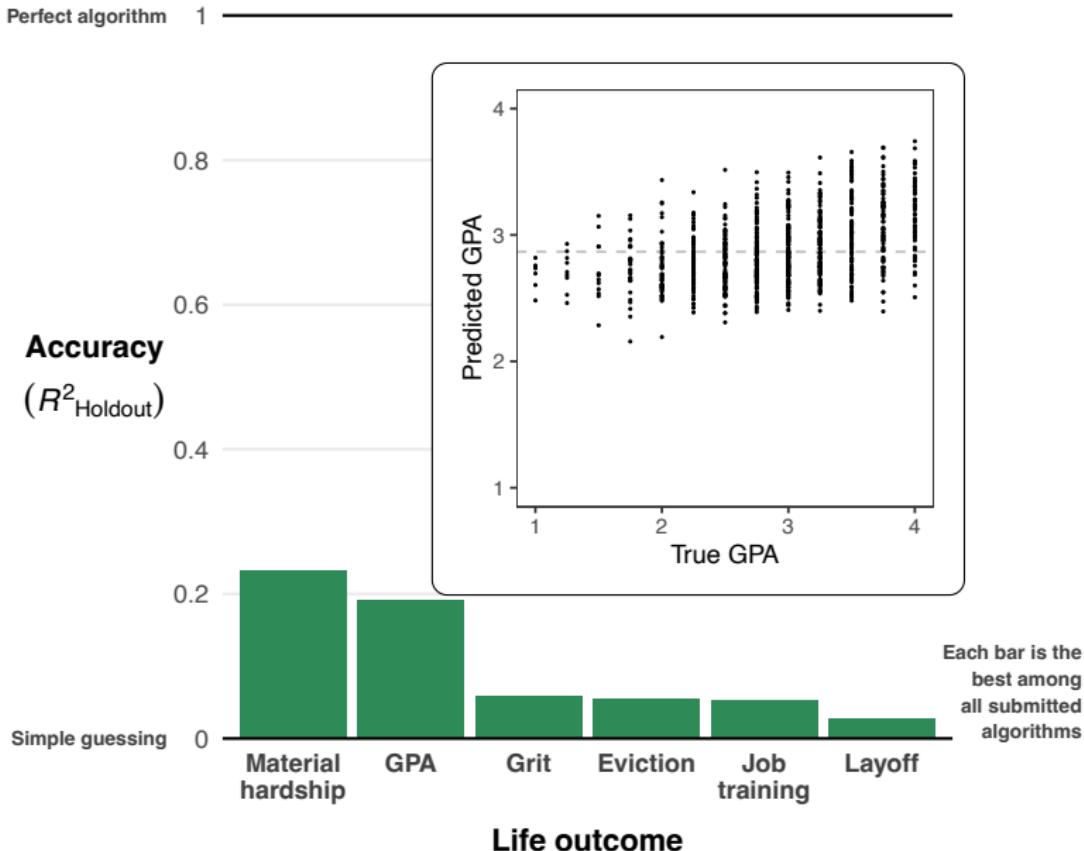

Best algorithms were not very accurate

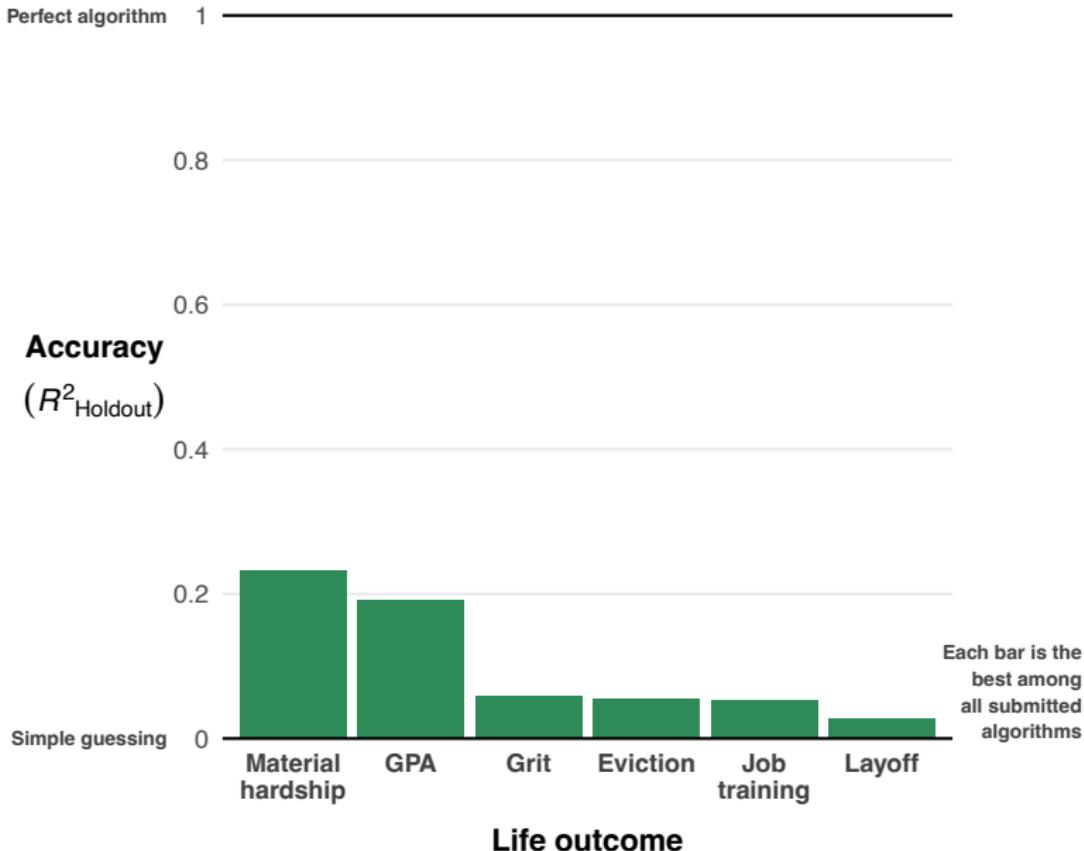

Best algorithms were not very accurate

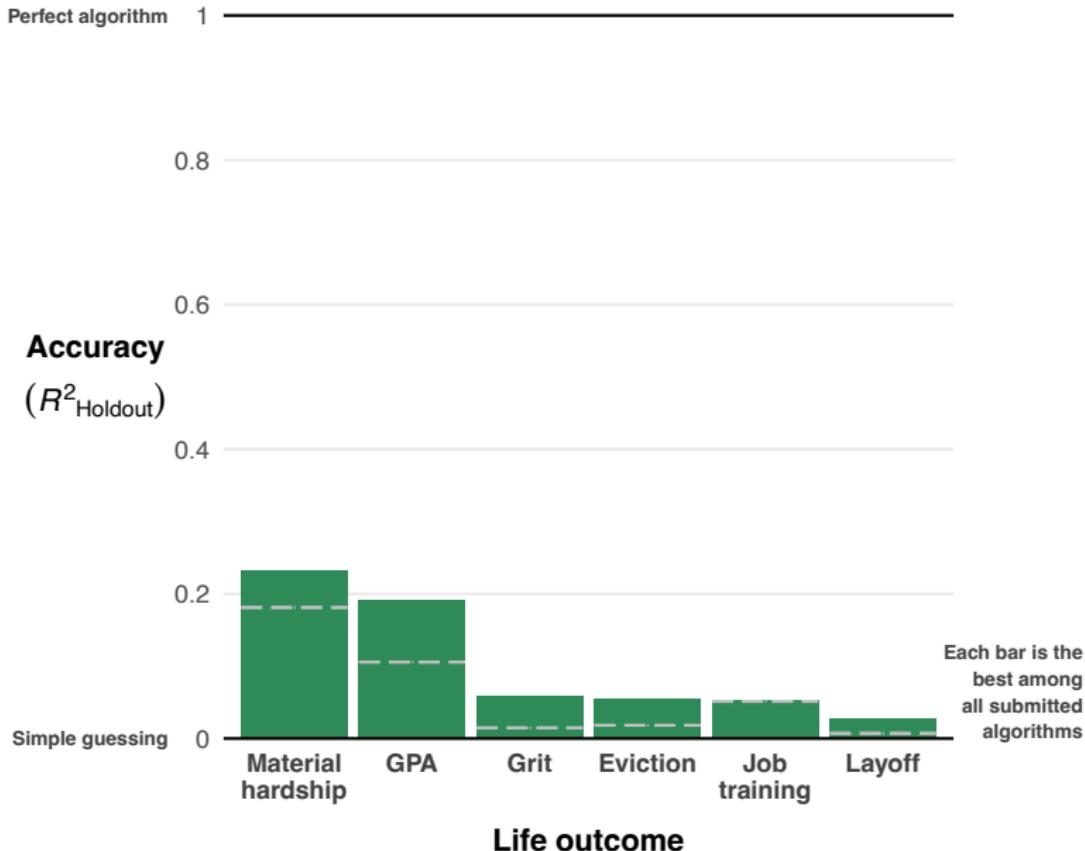

Best algorithms were not very accurate

Best algorithms were not very accurate

Lundberg et al. 2024.

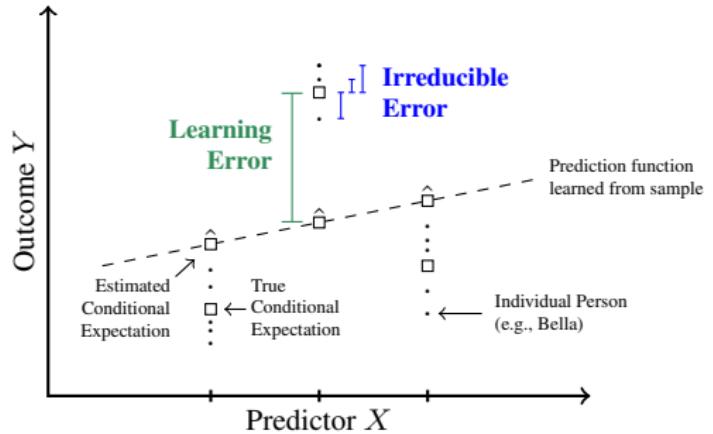

The origins of unpredictability in life outcome prediction tasks

In-depth, qualitative interviews

- ▶ 73 respondents in 40 families
- ▶ Separate interviews with the youth and primary caregiver
- ▶ Life history of the youth from birth to the interview (\approx age 18)

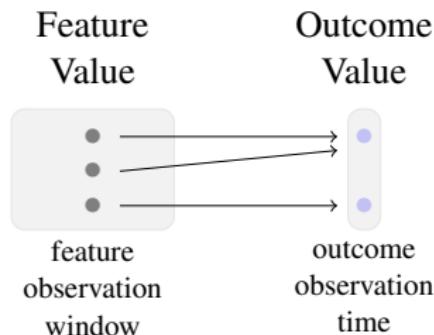

Irreducible error

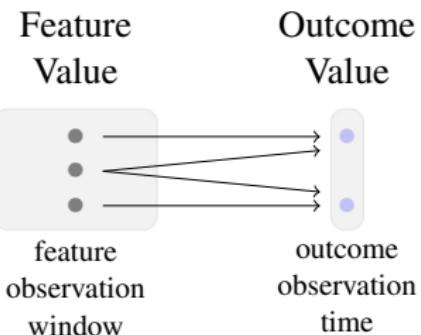

Zero Irreducible Error

Irreducible error is zero if each feature value maps to **one** outcome value

Non-Zero Irreducible Error

Irreducible error is non-zero if at least one feature value maps to **multiple** outcome values

Irreducible error: Unmeasurable features

Unmeasurable features occur after the feature observation window

Irreducible error: Unmeasurable features

Unmeasurable features occur after the feature observation window

- ▶ Bella: A lasting event

Irreducible error: Unmeasurable features

Unmeasurable features occur after the feature observation window

- ▶ Bella: A lasting event
 - ▶ after age 9, her father died

Irreducible error: Unmeasurable features

Unmeasurable features occur after the feature observation window

- ▶ Bella: A lasting event
 - ▶ after age 9, her father died
 - ▶ high school went off course

Irreducible error: Unmeasurable features

Unmeasurable features occur after the feature observation window

- ▶ Bella: A lasting event
 - ▶ after age 9, her father died
 - ▶ high school went off course
- ▶ Charles: A fleeting event

Irreducible error: Unmeasurable features

Unmeasurable features occur after the feature observation window

- ▶ Bella: A lasting event
 - ▶ after age 9, her father died
 - ▶ high school went off course
- ▶ Charles: A fleeting event
 - ▶ online high school

Irreducible error: Unmeasurable features

Unmeasurable features occur after the feature observation window

- ▶ Bella: A lasting event
 - ▶ after age 9, her father died
 - ▶ high school went off course
- ▶ Charles: A fleeting event
 - ▶ online high school
 - ▶ worked in the basement for one semester

Irreducible error: Unmeasurable features

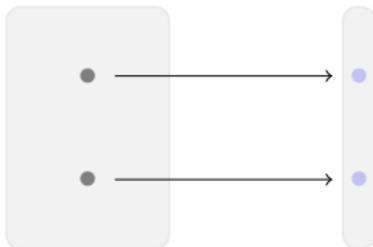

Unmeasurable features occur after the feature observation window

- ▶ Bella: A lasting event
 - ▶ after age 9, her father died
 - ▶ high school went off course
- ▶ Charles: A fleeting event
 - ▶ online high school
 - ▶ worked in the basement for one semester
 - ▶ video games = bad grades that semester

Irreducible error: Unmeasurable features

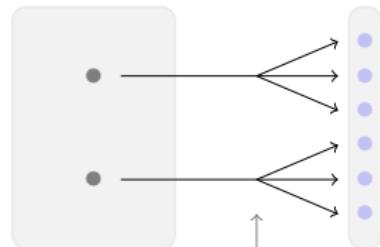

Zero Irreducible Error

Without intervening events,

Non-Zero Irreducible Error

With intervening events,

Intervening
Events Occur

Irreducible error: Unmeasured features

Irreducible error: Unmeasured features

Lola's social network

Irreducible error: Unmeasured features

Lola's social network

- ▶ elderly neighbor got Lola ready for school each day

Irreducible error: Unmeasured features

Lola's social network

- ▶ elderly neighbor got Lola ready for school each day
- ▶ grandparents remodeled the basement to house Lola

Irreducible error: Unmeasured features

Lola's social network

- ▶ elderly neighbor got Lola ready for school each day
- ▶ grandparents remodeled the basement to house Lola
- ▶ aunt employed Lola's mother in a family business

Irreducible error: Unmeasured features

Lola's social network

- ▶ elderly neighbor got Lola ready for school each day
- ▶ grandparents remodeled the basement to house Lola
- ▶ aunt employed Lola's mother in a family business

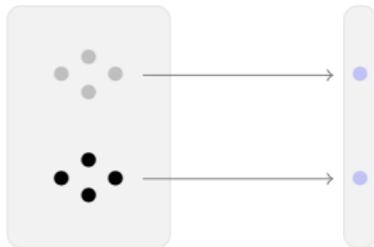

Predicted GPA: 3.04

Actual GPA: 3.75

Irreducible error: Unmeasured features

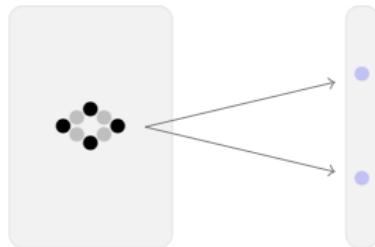

Zero Irreducible Error

Feature is measured,

Non-Zero Irreducible Error

Feature is unmeasured,

Irreducible error: Imperfectly measured features

Irreducible error: Imperfectly measured features

How close do you feel to your mom? Would you say...

Extremely close,	1
Quite close,.....		2
Fairly close, or,		3
Not very close?.....		4
REFUSED		-1
DON'T KNOW		-2

Irreducible error: Imperfectly measured features

How close do you feel to your mom? Would you say...

Extremely close,	1
Quite close,.....		2
Fairly close, or,		3
Not very close?	4
REFUSED	-1
DON'T KNOW	-2

A daughter told us about her “not very close” mother

Irreducible error: Imperfectly measured features

How close do you feel to your mom? Would you say...

Extremely close,	1
Quite close,.....	2
Fairly close, or,	3
Not very close?.....	4
REFUSED	-1
DON'T KNOW	-2

A daughter told us about her “not very close” mother

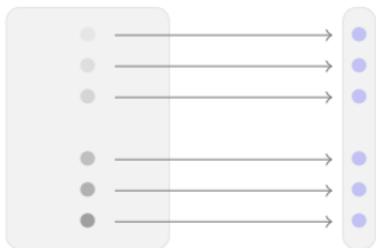

- ▶ kicked her out of the house and called police
- ▶ mother: “you better start treating me better, because I might not live that long.’’
- ▶ daughter: “I couldn’t even focus in class... I was shaking.’’

Outcome: Failed 8th grade. Low GPA. Dropped out.

Irreducible error: Imperfectly measured features

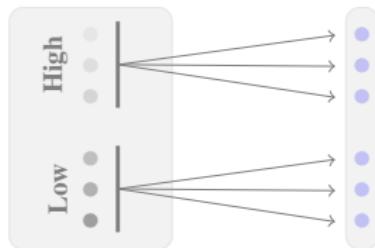

Zero Irreducible Error

Granular measurement,

Non-Zero Irreducible Error

Coarse measurement,

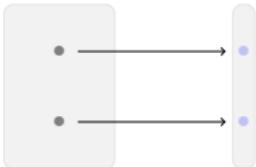

Particular Sources

Unmeasurable features

Events after the feature observation window create outcome variance

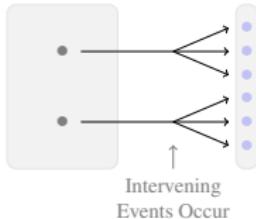

Zero Irreducible Error

Without intervening events,

Non-Zero Irreducible Error

With intervening events,

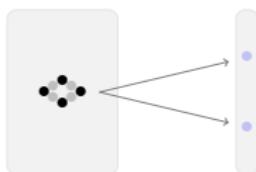

Unmeasured features

A measurable feature could distinguish units with highly disparate outcomes

Feature is measured,

Feature is unmeasured,

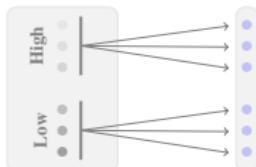

Imperfectly-measured features

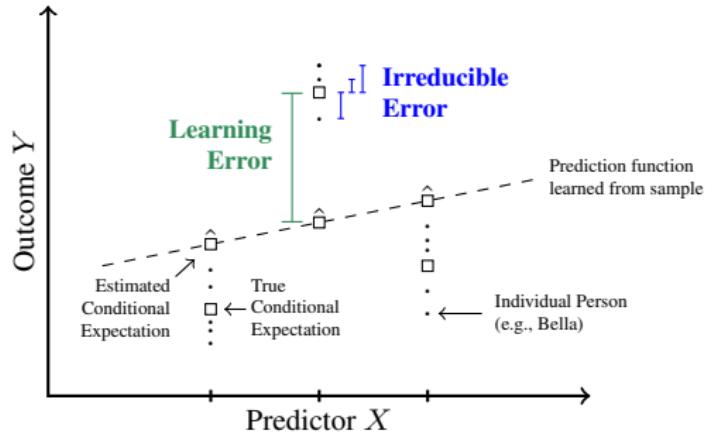

A feature is measured in coarse categories

Granular measurement,

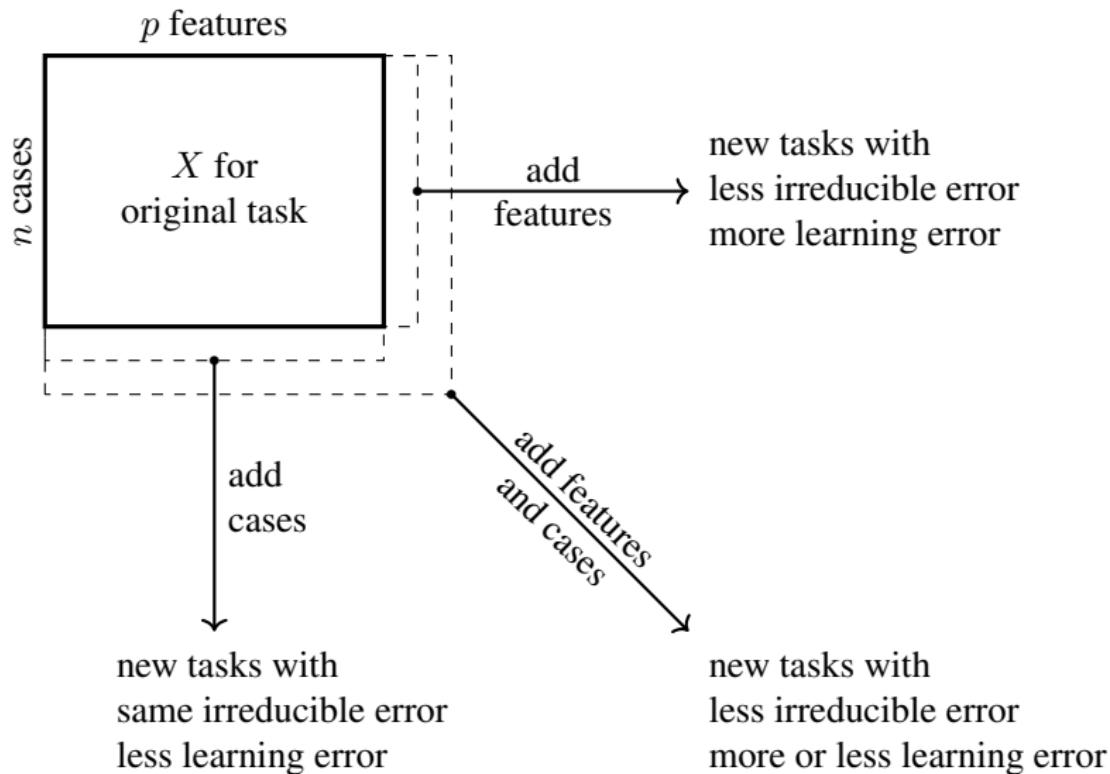

Coarse measurement,

DISCUSSION

Generalizing to other life outcome prediction tasks

Implications for policy

Implications for policy

- ▶ life outcome predictions may be inaccurate

Implications for policy

- ▶ life outcome predictions may be inaccurate
 - ▶ if generated by algorithms
 - ▶ if generated by humans

Implications for policy

- ▶ life outcome predictions may be inaccurate
 - ▶ if generated by algorithms
 - ▶ if generated by humans
- ▶ from accuracy to impact evaluations

Implications for science

Implications for science

- ▶ old goal: between-group variability
 - ▶ how means vary across groups

Implications for science

- ▶ old goal: between-group variability
 - ▶ how means vary across groups
- ▶ new goal: within-group variability
 - ▶ how variances vary across groups

Implications for science

- ▶ old goal: between-group variability
 - ▶ how means vary across groups
- ▶ new goal: within-group variability
 - ▶ how variances vary across groups
- ▶ more work to better understand unpredictability
 - ▶ empirical estimates
 - ▶ formal models
